### **HONEYWELL INTRODUCES ONLINE ENERGY SAVINGS CALCULATOR TO SAVE HOMEOWNERS ENERGY AND MONEY**

*New Tool Helps Consumers Make Better Decisions  
as They Choose Programmable Thermostats for Their Homes*

**MINNEAPOLIS, July 31, 2013** – Summer heat waves lead to high electricity bills as homeowners make a beeline for their thermostats to crank up the air conditioning. But do they know they have options when it comes to saving money on energy to cool and heat their homes?

To help educate homeowners, Honeywell (**NYSE: HON**) today introduced an energy savings calculator on its website [wifithermostat.com](http://wifithermostat.com). The energy savings calculator gives homeowners an easy way to determine the energy and money savings they could experience by switching to a Honeywell [Wi-Fi Smart](#) or another of Honeywell's full line of programmable thermostats. It's simple; just enter your zip code and some basic information about how you heat and cool your home and your typical schedule during the winter and summer, and the calculator estimates the potential savings in both dollars and the carbon offset amount shown by an equivalent number of trees.

Honeywell's website also features a rebate finder, which allows homeowners to search for rebates on Honeywell Wi-Fi Programmable thermostats based on zip codes. Local electric and gas utility companies, municipalities, counties and states offer the rebates, an acknowledgement that Honeywell thermostats give homeowners energy savings.

"Programmable thermostats save homeowners money on their utility costs," said Beth Wozniak, president of Honeywell Environmental and Combustion Controls. "But few homeowners realize this. Honeywell wants to help them make the best decisions for their homes and lifestyles. We have a full range of programmable thermostats for homeowners who are building a new home

or want a do-it-yourself upgrade. And for those that need a little help, Honeywell has a huge network of professional contractors that can help install a new thermostat.”

Both the energy savings calculator and rebate finder are powered by GreenOhm, which has an exclusive partnership with Honeywell for thermostat-specific tools. GreenOhm is a data and technology company that provides online and mobile solutions to communicate rebates and on-going cost savings estimates for energy saving products. For more information and to find the energy savings calculator and rebate finder visit [www.wifithermostat.com](http://www.wifithermostat.com).

”GreenOhm is thrilled to expand our partnership with Honeywell, the leader in thermostat products, providing their customers with the most advanced solutions and tools in the market today to identify local rebate opportunities and calculate precise ongoing cost savings,” said Lee Guthman, co-founder and president of GreenOhm.
